

EP0454423

Publication Title:

A liquid crystal display.

Abstract:

Abstract of EP0454423

A LCD display 100 is disclosed which comprises a plurality of transparent display layers 110, 120, 130 superimposed one on another, each display layer including a liquid crystal region and electrodes for applying a voltage across at least one portion of the region to display an image. A display of this construction allows three-dimensional images, and effects of depth and collision to be more clearly shown, particularly for use with a hand-held or table-top electronic game.
